COUNCIL OF GOVERNORS

Pursuant to the By-Laws of the National Highways Association, the Trustees have appointed for life a Council of Governors. Appointments thereto have been accepted by the Governors and ex-Governors of the following States: —

EMMET O'NEAL, Governor State of Alabama
GEORGE WILLIE PAUL HUNT, Governor State of Arizona
JUNIUS MARION FUTRELL, Acting Governor State of Arkansas
HIRAM WARREN JOHNSON, Governor State of California
ELIAS MILTON AMMONS, Governor State of Colorado
CHARLES ROBERT MILLER, Governor State of Delaware
PARK TRAMMELL, Governor State of Florida
JOHN MARSHALL SLATON, Governor State of Georgia
JOSEPH MACKEY BROWN, Ex-Governor State of Georgia
JOHN MICHENER HAINES, Governor State of Idaho
JAMES HENRY HAWLEY, Ex-Governor State of Idaho
SAMUEL MOFFETT RALSTON, Governor State of Indiana
GEORGE WASHINGTON CLARKE, Governor State of Iowa
GEORGE HARTSHORN HODGES, Governor State of Kansas
JAMES BENNETT McCREARY, Governor Commonwealth of Kentucky
LUTHER EGBERT HALL, Governor State of Louisiana
JARED YOUNG SANDERS, Ex-Governor State of Louisiana
WILLIAM TECUMSEH HAINES, Governor State of Maine
PHILLIPS LEE GOLDSBOROUGH, Governor State of Maryland
EUGENE NOBLE FOSS, Governor Commonwealth of Massachusetts
WOODBRIDGE NATHAN FERRIS, Governor State of Michigan
ADOLPH OLSON EBERHART, Governor State of Minnesota
EARL BREWER, Governor State of Mississippi
ELLIOTT WOOLFOLK MAJOR, Governor State of Missouri
HERBERT SPENCER HADLEY, Ex-Governor State of Missouri
SAMUEL VERNON STEWART, Governor State of Montana
JOHN HENRY MOREHEAD, Governor State of Nebraska
TASKER LOWNDES ODDIE, Governor State of Nevada
ROBERT PERKINS BASS, Ex-Governor State of New Hampshire
WILLIAM CALHOUN McDONALD, Governor State of New Mexico
WILLIAM SULZER, Ex-Governor State of New York
JOHN ALDEN DIX, Ex-Governor State of New York
LOCKE CRAIG, Governor State of North Carolina
WILLIAM WALTON KITCHIN, Ex-Governor State of North Carolina
LOUIS BENJAMIN HANNA, Governor State of North Dakota
JOHN BURKE, Ex-Governor State of North Dakota
JAMES MIDDLETON COX, Governor State of Ohio
LEE CRUCE, Governor State of Oklahoma
OSWALD WEST, Governor State of Oregon
JOHN KINLEY TENER, Governor Commonwealth of Pennsylvania
COLEMAN LIVINGSTON BLEASE, Governor State of South Carolina
FRANK MICHAEL BYRNE, Governor State of South Dakota
BENJAMIN WADE HOOPER, Governor State of Tennessee
OSCAR BRANCH COLQUITT, Governor State of Texas
WILLIAM SPRY, Governor State of Utah
ALLEN MILLER FLETCHER, Governor State of Vermont
JOHN ABNER MEAD, Ex-Governor State of Vermont
WILLIAM HODGES MANN, Governor Commonwealth of Virginia
ERNEST LISTER, Governor State of Washington
MARION E. HAY, Ex-Governor State of Washington
HENRY DRURY HATFIELD, Governor State of West Virginia
JOSEPH MAULL CAREY, Governor State of Wyoming
JOHN FRANKLIN ARTHUR STRONG, Governor Territory of Alaska
WALTER ELI CLARK, Ex-Governor Territory of Alaska
RICHARD LEE METCALFE, Head of the Department of Civil Administration, Isthmian Canal Commission
MAURICE HUDSON THATCHER, Ex-Head of the Department of Civil Administration, Isthmian Canal Commission
GEORGE WASHINGTON GOETHALS, Colonel U. S. A., Chairman and Chief Engineer, Isthmian Canal Commission
CUNO HUGO RUDOLPH, President Board of Commissioners of the District of Columbia
ROBERT EDWARD COONTZ, Governor Island of Guam
WALTER FRANCIS FREAR, Governor Territory of Hawaii
GEORGE RADCLIFFE COLTON, Governor Territory of Porto Rico

COUNCIL OF COMMISSIONORS

Pursuant to the By-Laws of the National Highways Association, the Trustees have appointed for life a Council of Commissionors. Appointments thereto have been accepted by the highway officials of the following States: —

VICTOR BOARDMAN ATKINS, Member State Highway Commission of Alabama
JOHN CRAFT, Member State Highway Commission of Alabama
EUGENE ALLEN SMITH, Member State Highway Commission of Alabama
LAMAR COBB, State Engineer of Arizona
REUBEN G. DYE, Chairman State Highway Commission of Arkansas
CHARLES WARREN HIGHFILL, State Highway Commissioner of Arkansas
ALBERT SYDNEY KILLGORE, State Highway Commissioner of Arkansas
CHARLES DUCHESNE BLANEY, Member State Highway Commission of California
NEWELL DYKE DARLINGTON, Member State Highway Commission of California
BURTON AUGUSTUS TOWNE, Chairman State Highway Commission of California
CHARLES JOSEPH BENNETT, State Highway Commissioner of Connecticut
WILFRED LUZERNE GIFFORD, Member State Highway Commission of Idaho
FRANK PIERCE KING, Member State Highway Commission of Idaho
JOSEPH RUSSELL FULKERSON, Member State Highway Commission of Illinois
LAFAYETTE FUNK, Member State Highway Commission of Illinois
HENRY CLAY BEARD, State Highway Commissioner of Iowa
JAMES WILLIAM HOLDEN, Member State Highway Commission of Iowa
WALTER SCOTT GEARHART, State Engineer of Kansas
ROBERT CRAIG TERRELL, Commissioner of Public Roads of Kentucky
WILLIAM EPHRAIM ATKINSON, State Highway Engineer of Louisiana
WILLIAM MADISON AYER, Member State Highway Commission of Maine
PARKER LEROY HARDISON, Ex-Commissioner of Highways of Maine
WILLIAM BULLOCK CLARK, State Geologist of Maryland
PHILLIPS LEE GOLDSBOROUGH, Member State Roads Commission of Maryland
ANDREW RAMSEY, Member State Roads Commission of Maryland
IRA REMSEN, Member State Roads Commission of Maryland
OVINGTON EUGENE WELLER, Chairman State Roads Commission of Maryland
CHARLES MERRITT BABCOCK, Member State Highway Commission of Minnesota
FREDERIC SOMERS BELL, Member State Highway Commission of Minnesota
CLARENCE IRVING McNAIR, Member State Highway Commission of Minnesota
FRANK WASHBURN BUFFUM, State Highway Commissioner of Missouri
ROBERT DAVIS KNEALE, Member State Highway Commission of Montana
ARCHIBALD WARHAM MAHON, Member State Highway Commission of Montana
GEORGE ROBERT METLEN, Member State Highway Commission of Montana
DONALD DOUGLAS PRICE, State Engineer of Nebraska
WILLIAM MICHAEL KEARNEY, State Engineer of Nevada
EDWIN AUGUSTUS STEVENS, State Road Commissioner of New Jersey
ROBERT PARVIN ERVIEN, Commissioner of Public Lands of New Mexico
JAMES ADAMS FRENCH, State Engineer of New Mexico
WILLIAM CALHOUN McDONALD, Chairman Commission of Public Lands of New Mexico
JOHN NELSON CARLISLE, Commissioner of Highways of New York
JOSEPH HYDE PRATT, State Geologist of North Carolina
JAY WESLEY BLISS, State Engineer of North Dakota
LOUIS BENJAMIN HANNA, Member State Highway Commission of North Dakota
JAMES REED MARKER, State Highway Commissioner of Ohio
SIDNEY SUGGS, Commissioner of Highways of Oklahoma
THOMAS BENJAMIN KAY, Member State Highway Commission of Oregon
BEN WILSON OLCOTT, Member State Highway Commission of Oregon
OSWALD WEST, Member State Highway Commission of Oregon
EDWARD MANNING BIGELOW, State Highway Commissioner of Pennsylvania
JOHN HENRY EDWARDS, Member State Board of Public Roads of Rhode Island
WILLIAM CLARENCE PECKHAM, Member State Board of Public Roads of Rhode Island
JOHN FRANCIS RICHMOND, Member State Board of Public Roads of Rhode Island
ROBERT BYRON TREAT, Member State Board of Public Roads of Rhode Island
EBBIE JULIAN WATSON, Commissioner of Agriculture, Commerce, and Industries of South Carolina
EDWARD CORNELIUS ISSENHUTH, Chairman State Highway Commission of South Dakota
BEN MARSHALL WOOD, Member State Highway Commission of South Dakota
WILLIAM DUKE BEERS, Secretary State Road Commission of Utah
WILLIAM SPRY, Chairman State Road Commission of Utah
CHARLES WINSLOW GATES, State Highway Commissioner of Vermont
PHILIP ST. JULIEN WILSON, State Highway Commissioner of Virginia
WILLIAM JACKSON ROBERTS, State Highway Commissioner of Washington
JOHN ADAM HAZELWOOD, Chairman Highway Commission of Wisconsin
WILLIAM OTIS HOTCHKISS, Secretary Highway Commission of Wisconsin
FREDERICK EUGENE TURNEAURE, Member Highway Commission of Wisconsin
JACOB HENRY VAN DOREN, Member Highway Commission of Wisconsin
ADRIAN JEFFERSON PARSHALL, State Engineer of Wyoming
MAJOR CHESTER HARDING, Highway Commissioner of the District of Columbia

OFFICERS

GENERAL COLEMAN DU PONT — Chairman Board of National Councillors
CHARLES HENRY DAVIS, C.E. — President
FREDERIC REMSEN HUTTON, M.E., SC.D., New York — General Secretary
JUDGE J. M. LOWE, Kansas City, Mo. — Vice-President
President National Old Trails Road Department
HON. JESSE TAYLOR, Jamestown, O. — Vice-President
Director Organization Department
President Ohio Good Roads Federation Division
LUCIEN PETERS McCALLA, M.D., Boise, Idaho — Vice-President
President Inter-Mountain Good Roads Department
H. B. VARNER, Lexington, N. C. — Vice-President
President North Carolina Good Roads Division
DR. JOSEPH HYDE PRATT, Chapel Hill, N. C. — Vice-President
Secretary North Carolina Good Roads Division
A. L. WESTGARD, New York — Vice-President
Director Transcontinental Highways
ELIAS VANDER HORST, C.E., New York — Vice-President
Secretary to Board of National Councillors
FRANCIS HILL BIGELOW — Assistant Treasurer
ARTHUR H. BLANCHARD, C.E., A.M., New York — Consulting Engineer
TIMOTHY W. SPRAGUE, S.B., Boston, Mass.
Engineer to Board of National Councillors
WILL WARD DUFFIELD — Engineer of Chart Construction
STANLEY E. BATES, S.B. — Engineer Highway Publications
JOHN STONE ALLEN, A.B. — Editor Highway Publications
C. H. CLAUDY, Washington, D. C. — Director of Publicity
O. W. GRUENING, Des Moines, Ia.
Manager Northwestern Organization Department
WALTER AGNEW ALSDORF — Manager Northern Organization Department

---

MORGAN, LEWIS & BOCKIUS, Philadelphia — General Counsel

CENTRAL NATIONAL BANK, Columbus, O.

AMALGAMATED ORGANIZATIONS

Realizing that vastly more effective work in the cause of *Good Roads Everywhere* can be accomplished by the coöperation of all Good Roads organizations, and realizing further that real coöperation can be secured only through amalgamation, the following Associations have amalgamated with and become divisions of the National Highways Association: —

NATIONAL OLD TRAILS ROAD ASSOCIATION
Now NATIONAL OLD TRAILS ROAD DEPARTMENT

INTER-MOUNTAIN GOOD ROADS ASSOCIATION
Now INTER-MOUNTAIN DEPARTMENT

CANADA, KANSAS CITY, AND GULF ROAD ASSOCIATION
Now CANADA, KANSAS CITY, AND GULF ROAD DEPARTMENT

OHIO GOOD ROADS FEDERATION
Now OHIO DIVISION

NORTH CAROLINA GOOD ROADS ASSOCIATION
Now NORTH CAROLINA DIVISION

GREAT WHITE WAY ASSOCIATION OF IOWA
Now GREAT WHITE WAY DIVISION

PENNSYLVANIA GOOD ROADS ASSOCIATION
Now PENNSYLVANIA DIVISION

WEST VIRGINIA GOOD ROADS ASSOCIATION
Now WEST VIRGINIA DIVISION

TEXAS GOOD ROADS ASSOCIATION
Now TEXAS DIVISION

ARIZONA GOOD ROADS ASSOCIATION
Now ARIZONA DIVISION

NEW MEXICO GOOD ROADS ASSOCIATION
Now NEW MEXICO DIVISION

Officers of the American Road Builders Association

PRESIDENT

SAMUEL HILL

President Washington State Good Roads Association

FIRST VICE-PRESIDENT

HAROLD PARKER

M. Am. Soc. C. E., Ex-Chairman Massachusetts Highway Commission

SECOND VICE-PRESIDENT

W. A. McLEAN

Chief Engineer of Highways, and Commissioner, Ontario, Canada

THIRD VICE-PRESIDENT

GEORGE W. TILLSON

Consulting Engineer, Borough of Brooklyn

SECRETARY

MAP OF PENNSYLVANIA, showing 3,000 miles of proposed National Highways. These highways will directly serve 7,570,016 inhabitants of the counties through which they pass, which is 99% of the total population of the State. Abutting counties have a population of 95,095, which is 1% of the total State population—being a total of 7,665,111 inhabitants, equal to 100% served and abutting on these proposed National Highways. The total road mileage in the State is 87,387, so that 3.43% in National Highways mileage will serve directly or abutting 100% of the people. Similar maps of other States are being prepared by the Association and will be issued as rapidly as possible.

NATIONAL HIGHWAYS
TO BRING ABOUT
GOOD ROADS EVERYWHERE

A "Stupendous Wastefulness"

"The bad roads of America constitute the most stupendous wastefulness of the most wasteful people of the globe." Thus does one of our prominent statesmen summarize the road situation in the United States to-day. It is not our purpose, however, to discuss the all too apparent fact of our need of Good Roads Everywhere in this country. Nowadays every one realizes that it is absolutely essential to the proper development of our Nation that strenuous steps be immediately taken to bring about the improvement of our two million miles of public roads.

The Good Roads Movement

There are now more than fifty major Good Roads organizations in this country, about five hundred State and local organizations, and about as many automobile clubs devoting all or much of their time to arousing a Nation-wide interest in this great movement. There are also in the neighborhood of 300,000 road officials, engineers, and builders, to a large number of whom is due great credit in teaching the people all over the country the need of good roads.

INTERSTATE TRUNK-LINE TRAFFIC — NEW YORK TO BOSTON

NATIONAL HIGHWAYS
TO BRING ABOUT
GOOD ROADS EVERYWHERE

A "Stupendous Wastefulness"

"The bad roads of America constitute the most stupendous wastefulness of the most wasteful people of the globe." Thus does one of our prominent statesmen summarize the road situation in the United States to-day. It is not our purpose, however, to discuss the all too apparent fact of our need of Good Roads Everywhere in this country. Nowadays every one realizes that it is absolutely essential to the proper development of our Nation that strenuous steps be immediately taken to bring about the improvement of our two million miles of public roads.

The Good Roads Movement

There are now more than fifty major Good Roads organizations in this country, about five hundred State and local organizations, and about as many automobile clubs devoting all or much of their time to arousing a Nation-wide interest in this great movement. There are also in the neighborhood of 300,000 road officials, engineers, and builders, to a large number of whom is due great credit in teaching the people all over the country the need of good roads.

INTERSTATE TRUNK-LINE TRAFFIC — NEW YORK TO BOSTON

IN EUROPE THEY REALIZE THE VALUE OF A HIGHLY IMPROVED ROAD

This educational work, which has been going on for the last ten or twenty years, has had its effect, and no other movement in this country now holds a more wide-spread public interest.

Former Errors in Road Management

Now, the fact that at the end of one hundred and thirty-five odd years of our National existence we have less than ten per cent of our road mileage with any semblance of improvement whatever has led the majority of people to the belief that there has been something radically wrong in the past with our system of attacking this great problem. Years ago all road work was considered as a matter of purely local concern. Furthermore, it was then thought that almost any one had knowledge enough to build such a common thing as a road, and it was due to these two ideas that the old-fashioned form of statutory labor on road work was so long in vogue, and even yet remains in a few scattered portions of the country.

But gradually there has been a development: first, from local roads to county roads, and, more recently, to State Highways.

Two Schools of Thought

At the present time we have progressed to still another stage, and the people are now firmly demanding that the National Government take a hand in solving our road problem. As the result of this demand there have grown up two schools of thought, depending upon the way it is believed the National Government should go about the work. These two schools of thought are represented, first, by National Highways; and, second, by Federal Aid. However, both of these terms are unfortunately used in a very loose sense, and that there may be no misunderstanding, let us define each, as follows:

National Highways

National Highways should mean trunk-line highways built, owned, maintained, and controlled by the National Government, without any connection whatever with the civil sub-divisions; namely, States, counties, townships, and towns. The money used in constructing these roads should come solely from the National Treasury, and the work should be done entirely under the direction of engineers and commissioners employed by the National Government.

Federal Aid

Federal Aid in road-building may take a variety of forms, but the general idea is that the National Government should donate money to the various States, counties, or townships to be used by them for the construction of roads. Federal authorities may or may not have some general kind of supervision over the construction of these roads, but the real authority is in the hands of the local communities, while the money comes from the Government.

No one can question but that the National Government has the legal right to construct National Highways, or that the matter of road improvement is anything but a National concern. Railroads have long been regulated by the Government under the Interstate Commerce Commission; and roads, being also a means of communication, are in a precisely similar class.

The Motor-Vehicle and Interstate Routes

With the coming of the automobile, and more especially the motor-truck — that vehicle which is destined to revolutionize hauling in the rural districts if given but half a chance — our main arteries of traffic have become distinctly interstate in character. For example: the distance between New York

WHILE IN AMERICA WE WASTE MILLIONS OF DOLLARS ANNUALLY DUE SOLELY TO BAD ROADS

IN EUROPE THEY REALIZE THE VALUE OF A HIGHLY IMPROVED ROAD

This educational work, which has been going on for the last ten or twenty years, has had its effect, and no other movement in this country now holds a more wide-spread public interest.

Former Errors in Road Management

Now, the fact that at the end of one hundred and thirty-five odd years of our National existence we have less than ten per cent of our road mileage with any semblance of improvement whatever has led the majority of people to the belief that there has been something radically wrong in the past with our system of attacking this great problem. Years ago all road work was considered as a matter of purely local concern. Furthermore, it was then thought that almost any one had knowledge enough to build such a common thing as a road, and it was due to these two ideas that the old-fashioned form of statutory labor on road work was so long in vogue, and even yet remains in a few scattered portions of the country.

But gradually there has been a development: first, from local roads to county roads, and, more recently, to State Highways.

Two Schools of Thought

At the present time we have progressed to still another stage, and the people are now firmly demanding that the National Government take a hand in solving our road problem. As the result of this demand there have grown up two schools of thought, depending upon the way it is believed the National Government should go about the work. These two schools of thought are represented, first, by National Highways; and, second, by Federal Aid. However, both of these terms are unfortunately used in a very loose sense, and that there may be no misunderstanding, let us define each, as follows:

National Highways

National Highways should mean trunk-line highways built, owned, maintained, and controlled by the National Government, without any connection whatever with the civil sub-divisions; namely, States, counties, townships, and towns. The money used in constructing these roads should come solely from the National Treasury, and the work should be done entirely under the direction of engineers and commissioners employed by the National Government.

Federal Aid

Federal Aid in road-building may take a variety of forms, but the general idea is that the National Government should donate money to the various States, counties, or townships to be used by them for the construction of roads. Federal authorities may or may not have some general kind of supervision over the construction of these roads, but the real authority is in the hands of the local communities, while the money comes from the Government.

No one can question but that the National Government has the legal right to construct National Highways, or that the matter of road improvement is anything but a National concern. Railroads have long been regulated by the Government under the Interstate Commerce Commission; and roads, being also a means of communication, are in a precisely similar class.

The Motor-Vehicle and Interstate Routes

With the coming of the automobile, and more especially the motor-truck — that vehicle which is destined to revolutionize hauling in the rural districts if given but half a chance — our main arteries of traffic have become distinctly interstate in character. For example: the distance between New York

WHILE IN AMERICA WE WASTE MILLIONS OF DOLLARS ANNUALLY DUE SOLELY TO BAD ROADS

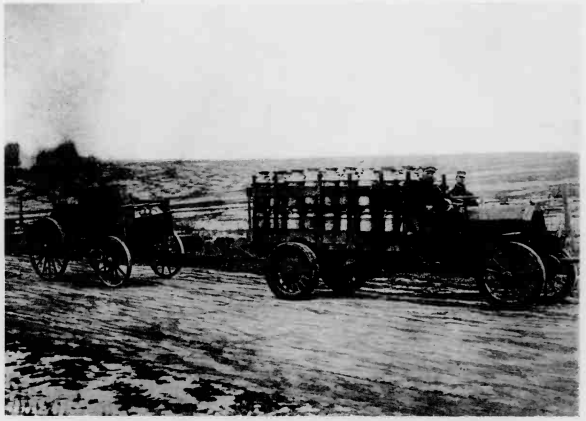
and Philadelphia is a matter of less than one hundred miles, which can easily be covered by an automobile in less than four hours, and yet three States must be traveled in going this distance. Similarly, Philadelphia and Baltimore are about the same distance apart, yet here again three States must be traversed between these two cities.

"A Condition — Not a Theory" In spite of the cry put up by many short-sighted people that we should not build long roads which the wealthy "speed bug" can race over, but that we should build only short local roads for the farmer, nevertheless, "a condition — not a theory" — as Cleveland used to say, "confronts us."

The automobile and the motor-truck have come to stay, and we must keep pace with them. The motor-vehicle has conclusively proven itself to be not primarily a rich man's plaything, but an actual economic necessity to our present-day needs of transportation, and we must, therefore, bring our road-bed up to the same degree of perfection as our improved rolling-stock.

The Motor-Truck and the Farmer It is impossible at the present time to place an upper limit to the future usefulness of the motor-vehicle for any purpose. It is certain, however, that it is only in the first stages of its development, and that the future will see it adapted to a limitless number of uses, particularly in the rural districts. Even now, farmers all over the country are employing the motor-truck in dairy farming, and thus greatly enlarging the areas within which such farming is profitable. The same is bound

WITH THESE CONDITIONS FARMING IS PROFITABLE ONLY WITHIN A SHORT RADIUS OF A MARKET TOWN



WITH IMPROVED ROADS AND IMPROVED VEHICLES FARMING IS PROFITABLE EVERYWHERE

to become true of all other farm products, and thus we see, with the increased distances which are profitably traveled by the motor-vehicles, how our main routes of travel are becoming longer and even distinctly interstate in character.

Now it should be quite apparent to all that forty-eight States constructing forty-eight different kinds of roads in forty-eight different and uncorrelated directions cannot build any comprehensive and related system of main trunk-line highways to traverse the whole country — no matter how excellent the efforts of the individual States may be. To illustrate the truth of this statement, let us refer to County Highways and State Highways as illustrated by two typical examples; namely, the States of Michigan and Massachusetts. Road maps of these two States are shown upon accompanying pages.

Michigan State "Reward" The roads of Michigan have heretofore been built only by counties and towns under the old-fashioned system of State Aid, or "reward" for improving the roads. No State roads exist whatever, and the result of this system is strikingly shown on the map; namely, little pieces of improved roads scattered all over the State — *roads beginning nowhere, going nowhere, ending nowhere!* Some counties have a few good roads, but they bear no relation whatever to the roads of any other county, thus giving rise to the utmost confusion of roads imaginable.

Massachusetts State Highways Contrast with this the excellently designed system of improved State roads shown on the map of Massachusetts. These roads furnish easy and direct means of communication along the most important and most traveled routes throughout the State —

and Philadelphia is a matter of less than one hundred miles, which can easily be covered by an automobile in less than four hours, and yet three States must be traveled in going this distance. Similarly, Philadelphia and Baltimore are about the same distance apart, yet here again three States must be traversed between these two cities.

"A Condition — Not a Theory" In spite of the cry put up by many short-sighted people that we should not build long roads which the wealthy "speed bug" can race over, but that we should build only short local roads for the farmer, nevertheless, "a condition — not a theory" — as Cleveland used to say, "confronts us."

The automobile and the motor-truck have come to stay, and we must keep pace with them. The motor-vehicle has conclusively proven itself to be not primarily a rich man's plaything, but an actual economic necessity to our present-day needs of transportation, and we must, therefore, bring our road-bed up to the same degree of perfection as our improved rolling-stock.

The Motor-Truck and the Farmer It is impossible at the present time to place an upper limit to the future usefulness of the motor-vehicle for any purpose. It is certain, however, that it is only in the first stages of its development, and that the future will see it adapted to a limitless number of uses, particularly in the rural districts. Even now, farmers all over the country are employing the motor-truck in dairy farming, and thus greatly enlarging the areas within which such farming is profitable. The same is bound

WITH THESE CONDITIONS FARMING IS PROFITABLE ONLY WITHIN A SHORT RADIUS OF A MARKET TOWN

WITH IMPROVED ROADS AND IMPROVED VEHICLES FARMING IS PROFITABLE EVERYWHERE

to become true of all other farm products, and thus we see, with the increased distances which are profitably traveled by the motor-vehicles, how our main routes of travel are becoming longer and even distinctly interstate in character.

Now it should be quite apparent to all that forty-eight States constructing forty-eight different kinds of roads in forty-eight different and uncorrelated directions cannot build any comprehensive and related system of main trunk-line highways to traverse the whole country — no matter how excellent the efforts of the individual States may be. To illustrate the truth of this statement, let us refer to County Highways and State Highways as illustrated by two typical examples; namely, the States of Michigan and Massachusetts. Road maps of these two States are shown upon accompanying pages.

Michigan State "Reward" The roads of Michigan have heretofore been built only by counties and towns under the old-fashioned system of State Aid, or "reward" for improving the roads. No State roads exist whatever, and the result of this system is strikingly shown on the map; namely, little pieces of improved roads scattered all over the State — *roads beginning nowhere, going nowhere, ending nowhere!* Some counties have a few good roads, but they bear no relation whatever to the roads of any other county, thus giving rise to the utmost confusion of roads imaginable.

Massachusetts State Highways Contrast with this the excellently designed system of improved State roads shown on the map of Massachusetts. These roads furnish easy and direct means of communication along the most important and most traveled routes throughout the State —

roads beginning somewhere, going somewhere, ending somewhere, according to one carefully designed plan. It has been estimated that these few but excellent roads take care of over half the road traffic of the entire State. Can there possibly be any argument between these two systems!

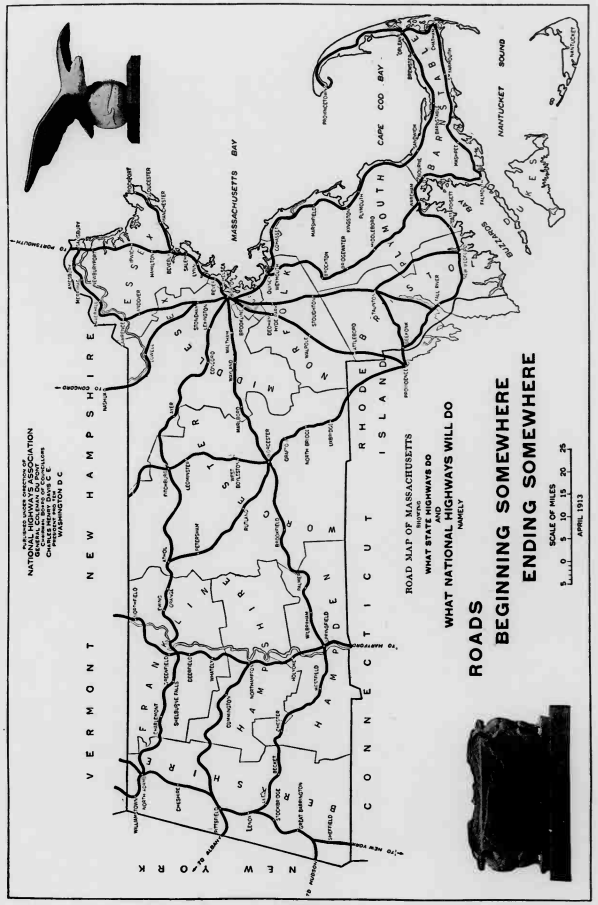
In fairness to Michigan, we are glad to say that they have very recently repudiated State aid and are inaugurating State Highways; and it is therefore conservative to predict that we may at an early date see that State gridironed with as complete a network of good roads as that of Massachusetts.

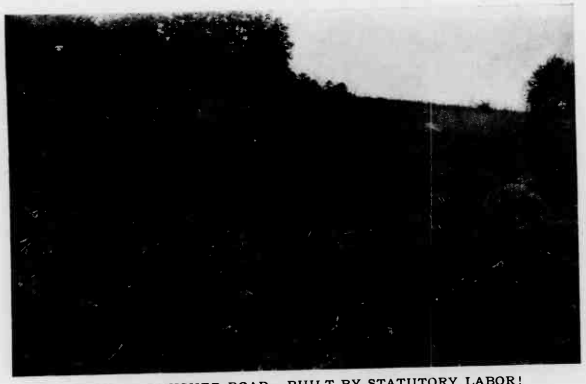
The Two Alternatives

Now we come to the matter of our Government taking a hand in road affairs we have precisely the same alternative, only upon a much larger scale. We may adopt Federal "Aid" to the States and obtain as a result a confusion of *roads beginning nowhere, ending*

MICHIGAN REPUDIATES "ROADS BEGINNING NOWHERE, ENDING NOWHERE"

MICHIGAN NOW CLAIMS "ROADS BEGINNING SOMEWHERE, ENDING SOMEWHERE." GOOD!





TYPE OF FINISHED ROAD — BUILT BY STATUTORY LABOR!

nowhere. Furthermore, we will have a few of the States using the government bonus judiciously with regard to their own individual State; but the large majority will waste this additional money without producing good roads, even as most of the counties of Michigan do not produce good roads.

On the other hand, if we adopt a Nation-wide system of National Highways we will speedily see our country covered with a network of good roads, just as the State of Massachusetts is effectively covered by a network of good State roads.

Government to Lead the Way

Furthermore, these roads will necessarily have a *uniform* excellence of construction and maintenance, having, as they will, the highest highway engineering talent obtainable to direct and carry out this work, which is possible only in our great government projects. Thus the Government will lead the way and make an example for all to follow in the attainment of Good Roads *Everywhere*.

And it is beyond question that States, counties, townships, and towns *will* follow to the attainment of Good Roads Everywhere. It is a significant fact that those States which now have the greatest percentage of improved roads are those which maintain a system of State Highways, *even though the mileage of this system itself may be relatively small.* For example: Massachusetts has 4,863 miles of improved roads, while only 904 miles, or 10.7 per cent of these, are State Highways. On the other hand, those States which still cling to the old-fashioned system of State Aid are the ones which are found to make the slowest progress in road improvement. The same is bound to be true of any form of Federal Aid.

There are a few people who still hold to the mistaken notion that National Highways would place in the hands of the Government a matter of purely local concern. We believe the facts above outlined have clearly demonstrated that roads, and particularly those roads which are now truly interstate routes, constitute a purely National concern. But to still further demonstrate this fact it may not be amiss to outline the general scope of National Highways in their relation to existing State Highways and county roads:

National Highways a Primary System

First, the National Government should construct a system of highways extending over the entire country and embracing those routes which are now, or will come to be, through routes of travel, and interstate in character. Such a system is shown upon the center page of this pamphlet. This map has been presented after a long and painstaking study of the needs of all parts of the country, gathered by a most thorough correspondence and personal investigation. The routes follow either the best existing roads or lines where the best grades and alignment can be secured consistent with serving the greatest number of people. The entire length measures only fifty thousand miles (a little over 2% of our present total mileage), and yet over 60% of our entire population is directly served by these routes — the whole country really served!

However, it is not supposed that this location is perfect in all respects, but is put forth merely as a tentative scheme, calculated to promote discussion and thus aid in a final determination. But whatever final location and mileage is fixed upon, it is essential that they should be built, maintained, and owned solely by the National Government.

State Highways a Secondary System

Similarly, each State should construct a secondary system of highways, similar in principle but differing, of course, in detail to that of Massachusetts. These highways, which would be feeders to the National Highways and which are essentially inter-county in character, should be built, maintained, and owned by the State.

THE TYPICAL COUNTY LINE — WHERE GOOD AND BAD ROADS MEET

TYPE OF FINISHED ROAD—BUILT BY STATUTORY LABOR!

nowhere. Furthermore, we will have a few of the States using the government bonus judiciously with regard to their own individual State; but the large majority will waste this additional money without producing good roads, even as most of the counties of Michigan do not produce good roads.

On the other hand, if we adopt a Nation-wide system of National Highways we will speedily see our country covered with a network of good roads, just as the State of Massachusetts is effectively covered by a network of good State roads.

Government to Lead the Way

Furthermore, these roads will necessarily have a *uniform* excellence of construction and maintenance, having, as they will, the highest highway engineering talent obtainable to direct and carry out this work, which is possible only in our great government projects. Thus the Government will lead the way and make an example for all to follow in the attainment of Good Roads *Everywhere*.

And it is beyond question that States, counties, townships, and towns *will* follow to the attainment of Good Roads Everywhere. It is a significant fact that those States which now have the greatest percentage of improved roads are those which maintain a system of State Highways, *even though the mileage of this system itself may be relatively small.* For example: Massachusetts has 4,863 miles of improved roads, while only 904 miles, or 10.7 per cent of these, are State Highways. On the other hand, those States which still cling to the old-fashioned system of State Aid are the ones which are found to make the slowest progress in road improvement. The same is bound to be true of any form of Federal Aid.

There are a few people who still hold to the mistaken notion that National Highways would place in the hands of the Government a matter of purely local concern. We believe the facts above outlined have clearly demonstrated that roads, and particularly those roads which are now truly interstate routes, constitute a purely National concern. But to still further demonstrate this fact it may not be amiss to outline the general scope of National Highways in their relation to existing State Highways and county roads:

National Highways a Primary System

First, the National Government should construct a system of highways extending over the entire country and embracing those routes which are now, or will come to be, through routes of travel, and interstate in character. Such a system is shown upon the center page of this pamphlet. This map has been presented after a long and painstaking study of the needs of all parts of the country, gathered by a most thorough correspondence and personal investigation. The routes follow either the best existing roads or lines where the best grades and alignment can be secured consistent with serving the greatest number of people. The entire length measures only fifty thousand miles (a little over 2% of our present total mileage), and yet over 60% of our entire population is directly served by these routes — the whole country really served!

However, it is not supposed that this location is perfect in all respects, but is put forth merely as a tentative scheme, calculated to promote discussion and thus aid in a final determination. But whatever final location and mileage is fixed upon, it is essential that they should be built, maintained, and owned solely by the National Government.

State Highways a Secondary System

Similarly, each State should construct a secondary system of highways, similar in principle but differing, of course, in detail to that of Massachusetts. These highways, which would be feeders to the National Highways and which are essentially inter-county in character, should be built, maintained, and owned by the State.

THE TYPICAL COUNTY LINE — WHERE GOOD AND BAD ROADS MEET

DEPRECIATION — OR THE HIGH COST OF BAD ROADS

County Roads a Tertiary System

Again, each county should take care of a tertiary system of roads which would bind together all parts of the county and act as feeders to the State Highways. These roads should be built, maintained, and owned solely by the county.

Advantages of Threefold System

Thus by this threefold system there would be obtained a separate and distinct field of endeavor for National, State, and County road officials, and likewise a certain definite object for National, State, and County road appropriations. No one would encroach upon, or be hampered by, either of the others. Consequently, the efficiency of each would be vastly increased, and the scope greatly enlarged.

And, as a final result of National Highways, we will not only procure our much-needed system of trunk-line highways, but will also speedily and economically obtain *Good Roads Everywhere* through the leadership and impetus given to the construction of State Highways and county and town roads. The other system — Federal Aid; joint appropriations, construction, or control — will obviously only prolong the present abominable chaos, and at the needless waste of millions of dollars annually.

France as an Example

The plan above outlined is precisely similar to the system worked out in European countries, and notably in France,* which Nation sets an example to the whole world in the excellence of her roads. It is beyond question that ultimately this country must likewise come to adopt some such system of National Highways, and therefore it is evident that the sooner we go about it the sooner will we obtain *Good Roads Everywhere*.

On the other hand, it is believed that the Government should not adopt any policy, either of National Highways or of Federal Aid in any form, until after

* See Appendix A.

a thorough study of the question has been made. Substantially, no great government work has ever been undertaken or large appropriations made therefor without a painstaking preliminary investigation and report to Congress by a specially appointed Commission. Such was the policy which was followed out with such excellent results in the case of the Panama Canal, and practically all other great projects. Should it not be the same in the matter of roads — the greatest and most important government undertaking of all?

A National Highways Commission

The magnitude of the project is such that it would seem utter folly to refer it to a regularly constituted congressional committee. Even granting that such a committee might be qualified to deal with the question (although no body of Congressmen could be expected to be expert as well as practical highway engineers), they would neither have the time nor the facilities properly to handle the work. The only proper solution, therefore, would seem to be to follow an established precedent and appoint a special commission composed of the highest talent in the Nation — men experienced and able to intelligently carry out such an investigation. Would not such a commission be able to advance a plan either for National Highways or for Federal Aid which, if followed out, would bring *Good Roads Everywhere* to this country most speedily and economically?

Let Us All Unite

No matter what one's own individual opinion may be as to the proper method of government action, no one can offer any valid objection to the creation of such an impartial civil commission. Should not, therefore, all road associations stand together and demand that Congress pass a Bill* authorizing the appointment of such a Highway Commission? If all will but co-operate upon this one course of action we will have made the most decided step in the history of our Nation towards the attainment of *Good Roads Everywhere*.

APPENDIX B

The good roads movement in the United States to-day is of more far-reaching importance than almost any other government undertaking. It has a much wider influence than the great Panama Canal can ever have. No matter coming before the next Congress will have a greater effect upon the business of the country during the next decade than the policy which shall be adopted with reference to roads. In view of this fact, should we not devote all our energies to investigating the question thoroughly and completely, that we may make no mistake, but adopt the best possible method of accomplishing the desired end? The National Highways Association has studied the question most thoroughly, and its conclusions are set forth in the accompanying address. Nevertheless, the Association believes most strongly that neither *this* plan nor *any other* plan should be determined upon until after a thorough and painstaking study of the question by the Government itself, by means of a special expert Highway Commission appointed from civil life, thus following the precedent established in the case of the Panama Canal and all other great government projects.

With this object in view, the following bill has been drafted: —

A BILL

For Congress to Create a National Highways Commission and Prescribing Its Powers and Duties

PROPOSED BY THE NATIONAL HIGHWAYS ASSOCIATION

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

SECTION 1. That a commission is hereby created, to be called the "National Highways Commission," to investigate, collect information, and report to Congress on the Highways of the United States, together with recommendations as to the proper policy of the National Government in respect thereto (whether by the establishment of a system of National Highways or by Federal Aid in the building of State Roads or otherwise), and as to the most appropriate legislation to carry such policy into effect.

SECTION 2. That the National Highways Commission shall consist of a Chairman as the executive head in responsible charge thereof, and of thirteen additional Commissioners as an "Advisory Council."

SECTION 3. That the President, by and with the advice and consent of the Senate, shall appoint said Commission as follows:

First. That the Chairman shall be or have been an Engineer by education and profession, and shall be a man of executive and business experience.

Second. The Chairman shall be appointed by the President.

Third. The thirteen members of the "Advisory Council" shall be appointed by the Chairman, by and with the advice and consent of the President, and shall be respectively qualified to represent the following interests in the body politic: (1) Agriculture, (2) Commerce, (3) Construction, (4) Economics, (5) Education, (6) Engineering, (7) Finance, (8) Legislation, (9) Maintenance and Traffic, (10) Materials and Machinery, (11) Military, (12) Transportation, (13) Travel, Touring, and Recreation.

(This enumeration is merely tentative; the intention is to name all of the general interests of the country, which are directly concerned in the development of a system of National Highways.)

Fourth. Vacancies occurring in the Commission shall be filled in the same manner as hereinbefore provided for original appointments.

Fifth. Any member of the Commission shall be subject to removal by the President for inefficiency, neglect of duty, or malfeasance in office.

SECTION 4. That the Chairman shall receive a salary of_____ dollars per annum and each other Commissioner a salary of_____ dollars per annum.

SECTION 5. That the powers and duties of the Chairman shall be:

(In this section should follow an enumeration of powers and duties in sufficient detail to indicate the extent to which the Commission is required to investigate and to give the Chairman the fullest possible power to carry out such investigation. The following points in particular should be covered:

(1) Executive direction of work.
(2) Appointment and removal of employees.
(3) Providing offices, laboratories, etc.
(4) Collection, tabulation, and publication of information, including experimental work, surveys, etc.
(5) Obtaining information and co-operation from governmental departments.
(6) Incurring necessary expense.
(7) Preparing and submitting a complete final report with recommendations.)

SECTION 6. That the duty of the "Advisory Council" shall be to assist the Chairman as he may direct and to advise with him at his request or on their own initiative.

SECTION 7. That the term of office of the Commissioners and their successors appointed hereunder shall end upon the delivery of their final report to the President, but not later in any event than_____, 19____.

SECTION 8. That for the purpose of carrying out the provisions of this Act, there is hereby appropriated the sum of_____dollars, out of any money in the Treasury not otherwise appropriated.

SECTION 9. That this Act shall be known as the National Highways Act; and shall take effect upon its passage.

The bill above outlined is designed to accomplish the following main objects: —

(*a*) The gaining of complete and reliable information, within a reasonable time, as a basis upon which to determine a policy and to frame proper legislation.

(*b*) The gaining of this information through a broadly representative Commission, whose work will necessarily evoke discussion and crystallize public opinion.

(*c*) The concentration of the authority and the responsibility of the Commission upon a single capable man, carefully chosen, subject to removal for cause, and ably supported by an "Advisory Council" representing all related activities (following therein the precedent that has proved so successful in the case of the Panama Canal).

No matter what one's own personal view of the matter may be, can any one believe that such a Commission will not determine upon the best possible solution of the road problem?

And will not the report of such a Commission be therefore a plan upon which all can unite? We think so. Do you?

APPENDIX C

The following statistics and maps are appended as a matter of interest to road-builders, showing in various ways the comparative progress of road-building in the several States of the Union.

The road-mileage statistics were taken from data collected by the United States Office of Public Roads of the Department of Agriculture, and are for the year 1909.

All statistics of population and area were taken from the Abstract of the Thirteenth Census of the United States, and, therefore, are for the year 1910.

The column "Wealth" was taken from a special report of the Census Bureau published in 1907, and represents the "estimated true value of all property" of each State in the year 1904.

Special pains have been taken to make these tables as accurate as possible. If any errors are found it is earnestly desired that they be called to the attention of the National Highways Association, Stanley E. Bates, Engineer Highway Publications, South Yarmouth, Mass.

Extra copies of these and additional tables and maps may be secured from the National Highways Association upon request.
